SUMMARY

Software Engineer (BS Software Engineering, CGPA: 3.57) who designed, built, tested, and maintains a live multi-company HRM platform (Next.js, TypeScript, Cloudflare Workers/D1) covering biometric attendance, leave, payroll, and reporting. Hands-on across full-stack development, QA, databases, security, and deployment, with additional client work in React.js, Node.js, and PHP. Eager to contribute as a Full-Stack Developer or QA Engineer on a remote product team.

PROJECTS

Final Year Project — Tokenization of Real-World Asset (RWA) for Rental Property

Blockchain-based platform

- Found and fixed a calculation bug in the smart contract's 70% minimum-ownership rule by writing and running unit tests.
- Enabled fractional ownership of rental properties through tokenization on Ethereum, using Solidity smart contracts for automated rental income distribution.
- Designed a secure ownership ledger and KYC-based compliance mechanisms, with a web-based front end built using React.js and Node.js.

Mulligans Corporate Website

Corporate website — React.js / TypeScript

- Built the company's corporate website using React.js, TypeScript, and Vite, with Tailwind CSS styling and Framer Motion animations.

WatchIt Website

Full-stack PHP web application

- Developed a site for buying and selling watches using HTML, CSS, JavaScript, and MySQL.

My Coffee Shop Website

JSP-based web application

- Built database-integrated product catalogue, ordering, and user login, styled for a cafe brand experience.

Online Banking System

OOP-based CLI application — C++ / Java

- Simulated core banking operations (accounts, transactions, users) with modular class design and in-memory data handling.

Hotel Management System

DSA-based CLI application

- Implemented room allocation, billing, and customer check-in/checkout workflows using efficient data structures.

Food Delivery App Interface

UI/UX design — Figma

- Designed user flow, restaurant browsing, cart management, and an intuitive ordering experience.

WORK EXPERIENCE

Full-Stack Developer & QA — Funtash Technologies | *Full-Time — Next.js, TypeScript, Cloudflare Workers/D1*

EDUCATION

BS Software Engineering — Scholarship Holder
Foundation University School of Science and Technology (FUSST), Rawalpindi
2022 – 2026

FSc Pre-Engineering
Fazaia Intermediate College (Nur Khan Base), Rawalpindi
2020 – 2022

Matriculation (Science)
OPF Girls College, Rawalpindi
2018 – 2020

SKILLS

Frameworks and Tools	Languages
Next.js	TypeScript
React.js	JavaScript
Node.js	SQL
Tailwind CSS	HTML
Cloudflare Workers	CSS
Drizzle ORM	PHP
REST APIs	Java
Manual Testing	Python (basics)
Unit Testing	
Debugging	

Integrations
SMTP
Brevo
Stripe for payment
WhatsApp Cloud API

HOBBIES

- Reading
- Writing
- Cooking
- Crocheting
- Knitting

- Designed, built, tested, and maintain the company's HRM (Human Resource Management) system end-to-end: Next.js 16, React 19, TypeScript, and Tailwind on Cloudflare Workers with D1 (SQLite) via Drizzle ORM; 70+ REST API routes, 47 UI components, and 40,000+ lines of TypeScript
- Multi-company architecture: company data isolation enforced in every API query and write and by 17 database triggers; 50+ tables and 33 versioned SQL migrations with seed, backfill, and integrity scripts
- Security: PBKDF2 password hashing, session cookies with 7-day and 30-minute idle expiry, CSRF protection, login lockout after failed attempts, password reset, server-side role-based page access (super admin, company admin, employee portal), and an activity log of every admin change
- Biometric attendance: built a Windows connector agent (Node.js, ZKTeco devices) that polls devices and posts punches to the API with bearer-secret authentication; duplicate-proof ingestion after outages, pending-employee creation for unknown device users, and a Biometric Devices management page
- Attendance engine: classifies each day (Present, Late, Half-Day, Incomplete, Absent, Leave, Holiday, Weekend) from punches, HR corrections, approved leave, holidays, and company rules; Employee Inspector with day corrections; Excel and PDF exports
- Leave management: leave types, quotas, balances with audit trail, approvers, and request, approve, and reject workflow that feeds attendance and payroll
- Payroll: server-side engine driven by company policy (shift, grace, half-day cutoff, divisor, rounding, allowances, deductions, tax), employee loans and support repayments, frozen monthly snapshots with audit trail, payslips, salary reports, and Excel export
- Employee and admin modules: employee profiles, photos, documents (Backblaze B2 or database storage), status history, bulk operations, designations and categories, holidays, announcements by email (SMTP) and WhatsApp Cloud API, scheduled end-of-day attendance email reports via a separate Cloudflare cron Worker, company branding, overview dashboard, and a self-service Employee Portal (attendance, leave, payslip, profile)
- Built a video meetings module (LiveKit/WebRTC with AI-generated meeting notes and transcription), currently feature-flagged off
- QA: wrote automated migration tests (Node test runner, in-memory SQLite) checking idempotency, company isolation, and untouched payroll history; identified and fixed bugs end-to-end; validated data accuracy with Drizzle Studio; authored PRD, architecture, design-system, and database normalization documents, including a documented review of known issues

Full-Stack Developer — Zentix | *Full-Time — Node.js/Express, React/Vite*

- Built a Discord bot and React/Vite web dashboard monitoring multiple social platforms (YouTube, Twitter/X, Twitch, Kick, Instagram, Reddit, TikTok) and auto-posting updates into Discord servers
- Diagnosed and fixed production issues: Reddit notifications failing from rate limiting (429 errors), Reddit feeds missing from the Notification Logs page, and a hardcoded user ID bug in the Twitch feed route
- During setup, traced 401 auth errors, a broken font path, and a missing /user/servers API route

Full-Stack Developer — Love Connection | *Full-Time*

- Worked across the admin panel frontend and the PHP backend API, integrating UI features with backend services
- Added an "Interested Users" feature to track interested user data
- Built user segmentation tabs in the admin dashboard to differentiate All Users vs. Paid Users
- Implemented transactional email sending via SMTP and Brevo for automated user messaging
